

Dear Park Laurel Owner,

The Board of Directors has resolved to form an ad-hoc committee to investigate opportunities within the community for electric vehicle charging.

Three years ago, the Association undertook the investigation and design of an electric vehicle charging system that would serve individual parking spaces, on a first come, first served basis with a very limited capacity.

With automakers incorporating many plug-in hybrid options, our community will soon exceed the capacity of our EV system. We would like to have a plan in-place for the accommodation of future electric and hybrid vehicles.

If you are interested in serving on this ad-hoc committee, please let me know.

All my best,
Ryan
